Updated Other Contaminant

Notes:

6/12/2014 at 12:08, on location. Spill appears to have come out the wellhead, staining vegetation within the property fence as well as vegetation in the neighboring field to the east. Well pad ground appears scraped up, but the impacted vegetation does not appear to have been removed yet. Phone call to report contact revealed that this is actually a separate spill (but in approximately the same location) that was discovered this morning, presumably due to the same cause. A spill report is being filled out. According to the report contact, the original spill was cleaned up by cutting and removing the impacted vegetation. The landowner did not want any scraping of the ground on his land. The report contact believes the cleanup procedure will be the same for this new spill.

Date: 7/21/2014 **Status:** Correspondence

Updated Other Volume:

Updated Other Contaminant

Notes:

Call in to report contact; follow-up call to check on cleanup progress since no second spill report was received by the NDDoH. Contact explained that what was thought to be a second spill was just impact from the original spill.

Notes:

10/1/2014 at 17:37, on location. Site currently has work-over rig. Vegetation on either side of fence row has been cut, and there is no visible staining on remaining stubble. Remaining vegetation directly on fenceline is minimal but still shows staining.
